▶ Kindergarten Unit 5: Two-Dimensional Geometry

Big Conceptual Idea: K-6 Progression on Geometry (pp. 1-7)

Read the Bridges <u>Unit Overview/Introduction</u> for Unit 5 pp. i-vi. Also read each <u>Module Overview</u> for the current week's sessions, and the current <u>Session Summary</u> along with details for the teaching of each session as you work through Unit 3. These Introduction/Overview/Summary sections provide focus, clarity, vocabulary, definitions, and examples for the "big mathematical ideas and understandings" critical to Kindergarten. This information will support your professional decision-making within the Sessions and Modules as needed.

	Unit Essential Question for the Teacher:
Background:	How do I help my students flexibly recognize, name, describe,
Read Bridges Unit 5	sort, compare, compose, decompose, and construct two-
Overview and	dimensional shapes observed in their environment, using
Introduction (pp. i-vi)	precise attributes regardless of size or orientation?

Framework: Balanced Calendar

Instructional note:

Unit 5 focuses heavily on Geometry, although K.CC, K.OA, and K.MD Standards continue to be developed. Geometry, as identified by the NVACS, is one of the critical areas of focus for Kindergarten. The Standards expectations summarized in the NVACS document on p. 9 state,

"(2) Students describe their physical world using geometric ideas (e.g., shape, orientation, spatial relations) and vocabulary. They identify, name, and describe basic two-dimensional shapes, such as squares, triangles, circles, rectangles and hexagons, presented in a variety of ways (e.g., with different sizes and orientations), as well as three-dimensional shapes such as cubes, cones, cylinders, and spheres. They use basic shapes and spatial reasoning to model objects in their environment and to construct more complex shapes" (NVACS, 2010)

In Kindergarten, students work systematically, deeply, and extensively to build mental visualization of geometric concepts and spatial relations. It is beneficial to keep this in mind in working through the Bridges instructional materials especially for Units 5 and the first two Modules of Unit 6. Position words such as above, below, next to, behind, in front of, and beside are also introduced and used in *Number Corner*.

The focus for Kindergarten is spatial structuring and spatial relations, including the composing and decomposing of shapes. This work becomes the foundation for all further work involving spatial structuring in higher mathematics (multiplication, area, volume...) and lays foundations for work in the physical sciences, engineering, and the arts (K-6 Progression on Geometry, pp. 2, 4). Therefore, it is important to vary in many ways the examples and models used so students build flexible understandings of geometric concepts and do not learn these in limited ways. WCSD has available an additional set of shape cards, which provide various orientations and sizes to support the development of this flexible understanding of shape, orientation, and relative position.

Two-dimensional shapes are defined by NVACS as shapes lying in a plane or "flat". These shapes have only the dimensions of length and width. Three-dimensional shapes are defined as "solid". These shapes have the dimensions of length, width, and height, as they have thickness or "stackability". "Lying in a plane" is our more precise understanding of two-dimensional, although with emergent learners we support their emerging cognitive understandings of more general differences, encouraging growth to more precise understandings over time. Consider carefully, however, the materials and vocabulary presented as to not create confusion for our students. Throughout this Unit there are a number of suggestions, clarifications, and supports provided to inform work in geometry with students. Consider referencing the <u>K-6 Progression on Geometry</u> (referenced above) if further explanations or examples are needed regarding what students should know and be able to do within geometry by the end of Unit 6.

The mathematics content of Unit 5:

Children construct understandings in connected and integrated ways, not as isolated, individual pieces. Therefore, continually ask students to explain how they are problem solving ("How did you know?", "What made you think that?", etc.) so you can make explicit the connections students are already making from previous learning, strengthen the synaptic connections being constructed, and encourage the continuance of this sense-making behavior (NVACS, 2010, p. 6).

- Support and instruct to the development of the new big mathematical ideas of:
 - Circle- a two-dimensional (flat) shape made by drawing a curve that is always the same distance from a point called the center.
 - Triangle- a two-dimensional (flat) shape with 3 sides.
 - Rectangle- a two-dimensional (flat) shape with 2 pairs of parallel sides (4 sides total) and 4 right angles.
 - Square- a two-dimensional (flat) shape with 4 congruent sides and 4 right angles.
 - Hexagon- a two-dimensional (flat) shape with 6 sides.

- Trapezoid- a two-dimensional (flat) shape with 4 sides, exactly 1 pair of which are parallel.
- Rhombus-a two-dimensional (flat) shape with 4 congruent sides.
- Cube- a three-dimensional shape (solid) whose 6 faces are all squares.
- Cone- a three-dimensional shape (solid) with a circular or elliptical base and a curved surface that tapers to the vertex.
- Sphere- a three-dimensional shape (solid) constructed so that every point of the surface is the same distance from a point called the center.
- Cylinder- a three- dimensional shape (solid) with one curved surface and two congruent flat ends that are circular or elliptical.
- Vertex/corner The point at which the sides of a polygon, or the edges of a polyhedron meet.
- Watch for students' attempts at thinking about and using these new strategic behaviors/strategies to demonstrate their emerging understandings of the big mathematical ideas:
 - Graphing
 - Classifying objects by attributes
 - Composing shapes (making shapes out of other shapes (E.g. Making a rectangle out of two triangles).
 - Decomposing shapes (breaking a shape into other shapes (E.g. Making two triangles from a rectangle).
 - Constructing shapes (putting attributes together to build a shape (E.g. drawing three straight lines connected at three separate corners to create a closed shape called a triangle).

Over time, with supportive and scaffolded instruction and interactions, students come to more precise understandings of geometry, as well as develop appropriate precision with mathematics content and vocabulary.

On-going enrichment:

- Continue noting the *Skills Across the Grade Level* chart in the Introduction section (Unit 5 p. v). K.MD.3 and K.G 1-4 are standard expectations benchmarked to be secure by the end of this Unit. This includes classifying, counting and graphing objects; naming and describing shapes by name and using positional words (regardless of size and orientation); and identifying and comparing 2-D shapes by attributes (regardless of size and orientation). K.OA.3 & 6 and K.G.5 & 6 continue to be developed. (See p. v) This is important information for those day-to-day professional instructional decisions you have to make within each Session as to what discussions or activities to extend or cut short or emphasize or skip or, etc.
- Expect all students to engage with the mathematics.

	ademic Vocabulary nsistently during instruction.	
Essential Academic Vocabulary: (first time explicitly taught) *indicates Word Resource Cards are available in the materials	Review Vocabulary: (Vocabulary from Number Corner or prior	units)
vertex or corner* side* flat round solid curved straight sphere* three-dimensional (3-D) shape* two-dimensional/ (2-D) shape* estimate* least* most*	compare* trapezoid* hexagon* rhombus* above* below* beside* next to* attribute* pattern* more/less	circle* triangle* square* rectangle* length*

Additional terminology that students may need support with: shape(s), sort, graph, in all, color, large, small, strategies, problem, order.

Standards listed in **bold** indicate a focus of the lesson.

NVACS (Content and	Mathematical Development	Instructional Clarifications & Considerations
Practices)	of the Big Idea	
Module 1- Ses	ssion 1: What Do You Know Abo Access Prior Learning and	ut Shapes? Guiding Questions:
K.MD.3 K.G.1 K.G.2 K.G.4 MP.1 MP.6 MP.7	 Access Phol Learning and Connections to Future Learning: Classify objects into categories, and count the number objects in different categories are covered in Unit 7. Describe and identify objects in the environment using geometric shape names is also addressed in Unit 6. Beginning with the Big Idea and key Strategic Behaviors: naming shapes identifying shapes by their defining attributes 	 What shapes can we see in our world? What makes shapes different from each other? How can a shape be described? Instructional Notes: Visual Models are pattern blocks or preferably die cut-outs if available. Pattern blocks are actually 3-dimensional shapes because they have a length as width and a height. Use pattern block sorting as an anticipatory set. Consider tracing around the shape as you add it to the chart (it is the footprint that creates the 2-dimensional shape; the interior is not part of the shape, just the line segments create the shape). Focus your conversation around the 2-dimensional shape formed by tracing around the pattern block on the poster. Word resource cards are helpful for constructing the chart. ELL suggestion says to sort by gender (boys, girls). Separating by gender may have negative impacts to students' identities, especially those who are gender fluid. Consider sorting by shirt color. Literature Connections: The Shape of Things by Dayle Ann Dodds - good connection to point out how shapes are seen around our environment. Launches discussion of "What is a 2-D shape?"
Module 1- Ses	ssion 2: What Is a Circle?	 Number Corner Connections: Classify objects into categories, count the number objects in different categories. It reappears in Oct, Dec., Jan, Feb, Mar, Apr, & May. Describe and identify objects in the environment using geometric shape names. Addressed in Sept, Nov, and Dec.
K.MD.3 K.G.1 K.G.2 K.G.3 K.G.4 MP.1 MP.6 MP.7	 Access Prior Learning and Connections to Future Learning: Identify shapes as two- dimensional or three-dimensional is reinforced in Unit 6. Identify shapes regardless of orientation or size is also covered in Unit 6. Beginning with the Big Idea and key Strategic Behaviors: naming shapes identifying shapes by their defining attribute 	 Guiding Questions: What is a circle? What is a circle? What makes shapes different from each other? What is the difference between a 2-D and 3-D shape? Instructional Notes: Omit all aspects of this lesson that smash a sphere into a circle - <u>Step 9, 11, 12, 13</u>. After Step 8. teacher & students makes spheres with clay. Omit students cutting their spheres in half; teacher only brings in other spherical objects including an orange (or other object that could be cut without losing its shape) as visuals; teacher only cuts the orange in half again like yesterday tracing around the half sphere to create the footprint of the circle, added to the chart from yesterday. Continued steps discussion is based around the teachers 2-dimensional circle that the teacher created on the chart and the students clay spheres and other spherical objects. In <u>Step 16</u> – clarify that we can make circles out of the items names (such as "a clock" or "a plate") by tracing around it; you might bring examples of brainstorming items that might demonstrate this. Number Corner Connections: Expected to be secure - Identify shapes as two-dimensional or three-dimensional. It is addressed in Sept. and Nov. months. Identify shapes regardless of orientation or size. It is addressed in Sept. and Nov. months. Writing and Enrichment: Home Connections p. 10 and Home Connection tab p. 99-103. Search for circles also needs to be clarified with students to reinforce that it is the outline of a clock is a circlethe clock itself could be a cylinder.

Module 1. Se	ssion 3: Pattern Block Sort and C	Count
Module 1 Sc	Access Prior Learning and	Guiding Questions:

	composing and decomposing	Identify shapes regardless of orientation or size. This is addressed in Sept. and Nov.
	shapes	months.
	Doveloping to Secure	Analyze and compare two-dimensional shapes and use informal language to describe
	Developing to Secure:	their parts and attributes. This is also addressed in Sept. and Nov. months.
	naming shapes	Child Watching and Assessments:
	classifying shapes	Two-Dimensional Shapes & Their Attributes CHECKPOINT – observe students in
	identifying shapes by their	Work Places (see p. 18 and T23). Also, see reteaching suggestion in the Assessment
	Identifying shapes by their defining attributes	<i>Work Places</i> (see p. 18 and T23). Also, see reteaching suggestion in the Assessment Binder, Bridges Unit Assessments tab p. 56.

Andule 3- Se	ession 5: Introducing Work Place	5E Hungry Caternillars
	Access Prior Learning and	Guiding Questions:
K.CC.6	Connections to Future Learning:	How do the pattern block shapes relate to one another?
K.G.1	Identify shapes as two-	How can I use smaller shapes to form larger shapes?
K.G.1 K.G.2	dimensional or three-	What is the best strategy to fill your caterpillar to win this game?
	dimensional, identify shapes	
K.G.4	regardless of orientation or size	Instructional Note:
K.G.6	and analyze and compare two-	Visual models are pattern blocks or 2-D pattern block shape cut outs.
MP.1	dimensional shapes using	Literature Connections:
	informal language to describe	Ten Wriggly Wiggly Caterpillars by Tiger Tales and Debbie Tarbett
MP.5	their parts and attributes are all	The Hungry Caterpillar by Eric Carle
MP.7	reinforced in Unit 6.	Number Corner Connections
	 Compose simple shapes to form 	Number Corner Connections:
	larger shapes is also addressed	 Expected to be secure - Identify shapes as two-dimensional or three-dimensional. This is addressed in Sent and New months.
	in Unit 2.	addressed in Sept. and Nov. months.
		 Identify shapes regardless of orientation or size. This is addressed in Sept. and Nov. months.
	Developing the Big Idea and key	
	Strategic Behaviors:	 Analyze and compare two-dimensional shapes and use informal language to describe their parts and attributes. This is also addressed in Sast and Nev, menths.
	• composing and decomposing	their parts and attributes. This is also addressed in Sept. and Nov. months.
	shapes	Writing and Enrichment:
		 See Teacher Masters (M3 S5 p. T24) of the Work Place Guides for Differentiation ideas.
	Developing to Secure:	
	naming shapes	
		• <i>Home Connection</i> p. 21 and <i>Home Connections</i> tab pp. 131-132.
	classifying shapes	
	identifying shapes by their	
	defining attributes	
iodule 4- Se	ession 1: Shapes & More Shapes	Guiding Questions:
K 00 0	Access Prior Learning and	How do we use shapes in daily life? Where can I find shapes around my world?
K.CC.3	Connections to Future Learning:	
K.CC.6	 Identify shapes as two- 	Instructional Notes:
K.MD.3	dimensional or three-	• Visual models are the 5 <i>Work Place</i> models and various game board visuals.
K.G.1	dimensional, identify shapes	Emphasize that students can describe shapes initially using visual descriptions (long,
K.G.2	regardless of orientation or size	pointy, etc.) but try to focus their attention on the relevant attributes (e.g. number of sides
	and analyze and compare two-	sides of equal length). A discussion here would also include how color is a non-defining
K.G.3	dimensional shapes using	attribute.
K.G.4	informal language to describe	
K.G.5	their parts and attributes are all	Literature Connections:
K.G.6	reinforced in Unit 6.	Captain Invincible and the Space Shapes by Stuart J. Murphy
	Compose simple shapes to form	
	larger shapes is also addressed	Number Corner Connections:
MP.1	in Unit 2.	 Expected to be secure - Identify shapes as two-dimensional or three-dimensional. This is
MP.4	III UIIII 2.	addressed in Sept. and Nov. months.
MP.5	Developing the Big Idea and key	Identify shapes regardless of orientation or size. This is addressed in Sept. and Nov.
MP.7	Strategic Behaviors:	months.
		Analyze and compare two-dimensional shapes and use informal language to describe
	constructing shapes	their parts and attributes. This is also addressed in Sept. and Nov. months.
	• graphing	
	 composing and decomposing 	
	shapes	
	Developing to Secure:	
	 naming shapes 	
	classifying shapes	
	 identifying shapes by their 	
	defining attributes	

	ssion 2: There's a Shape in My P	ocket. Day 1
	Access Prior Learning and	Guiding Questions:
K.G.1	Connections to Future Learning:	Why do shapes have names?
K.G.2	 Identify shapes regardless of 	What questions can I ask to find out what shape it is quickly?
	their orientation or size, and	
K.G.3	analyze and compare two-	Instructional Notes:
K.G.4	dimensional shapes using	Visual models are 2-D shapes.
	informal language to describe	Consider enriching with the WCSD Shape options. Note that color is a non-defining
MP.1	their parts and attributes are	 attribute. This activity provides opportunities to discuss logical reasoning strategies and questions
MP.3	reinforced in Unit 6.	 This activity provides opportunities to discuss logical reasoning strategies and questions that are most efficient to deduce what shape is in the person's pocket.
MP.8		 Digital display tool link on the <u>Bridges web site</u>.
	Developing the Big Idea and key	Digital display tool link of the <u>bridges web site</u> .
	Strategic Behaviors:	Number Corner Connections:
	 analyzing data 	Expected to be secure - Identify shapes regardless of orientation or size. This is
		addressed in Sep.t and Nov. months.
	Developing to Secure:	Analyze and compare two-dimensional shapes and use informal language to describe
	 naming shapes 	their parts and attributes. This is addressed in Sept. and Nov. months.
	 classifying shapes 	Writing and Enrichment:
	 identifying shapes by their 	Home Connection p. 10 and Home Connection tab pp. 133-134.
	defining attributes	• Home connection p. to and Home connection tab pp. 155-154.
Module 4- Se	ssion 3: There's a Shape in My P	ocket, Day 2
	Access Prior Learning and	Guiding Questions:
K.G.1	Connections to Future Learning:	Why do shapes have names?
K.G.2	 Identify shapes regardless of 	 What questions can I ask to find out what shape it is quickly?
K.G.3	orientation or size and	laster effected Netes
K.G.3	analyze and compare two-	Instructional Notes:
N.G.4	dimensional shapes using	 Visual models are 2-D shapes. Consider enriching with the WCSD Shape options. Note that color is a non-defining
	informal language to describe	Consider entiring with the WCSD Shape options. Note that color is a non-defining attribute.
MP.1	their parts and attributes are	 This activity provides opportunities to discuss logical reasoning strategies and questions
MP.3	all reinforced in Unit 6.	that are most efficient to deduce what shape is in the person's pocket.
MP.8		
	Developing the Big Idea and key	Number Corner Connections:
	Strategic Behaviors:	• Expected to be secure - Identify shapes regardless of orientation or size. It is addressed in
	 analyzing data 	Sept. and Nov. months.
	Developing to Colours	 Analyze and compare two-dimensional shapes and use informal language to describe their parts and attributes. This is also addressed in Sept. and Nov. months.
	Developing to Secure:	their parts and attributes. This is also addressed in Sept. and Nov. months.
	 naming shapes 	
	classifying shapes	
	 identifying shapes by their 	
	defining attributes
